

# data engineer

📍 Bangalore   🏢 Full time   🕒 2-5 yrs

We are looking for an experienced data engineer to join our team. You will use various methods to transform raw data into useful data systems. Overall, you'll strive for efficiency by aligning data systems with business goals.

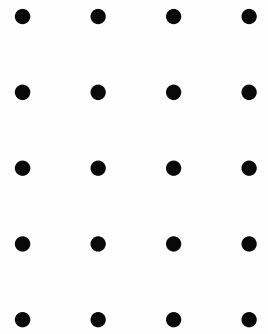

To succeed in this data engineering position, you should have strong analytical skills and the ability to combine data from different sources. Data engineer skills also include familiarity with several programming languages and knowledge of learning machine methods.

If you are detail-oriented, with excellent organizational skills and experience in this field, we'd like to hear from you.

## who we are

Betterplace is a technology platform designed to hire, manage, and engage the blue-collar workforce with ease with our all-in-one lifecycle platform. Designed for large enterprises, the platform enables you to manage end to end lifecycle of your blue-collar employees. Device – agnostic. Customizable. Scalable. Uniquely digital.

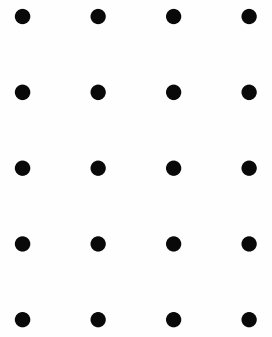

## what we're looking for

- Excellent programming skills (Python)
- Experience with big data stack (Spark) and NoSQL stores is advantageous
- Have experience working in Cloud, preferably Google Cloud Platform or Azure
- Strong experience in data engineering with both RDBMS, columnar databases like BigQuery, Cassandra and MongoDB
- Great at solving problems; debugging; troubleshooting; and designing & implementing solutions to complex technical issues
- Aptitude to independently learn new technologies, prototype and propose solutions
- Proficiency in a Unix/Linux environment for automating processes with shell scripting
- Experience with container technology
- Hands on experience of designing, building and supporting RESTful APIs
- Expertise in MSBI technologies any one of these (Google DataStudio, Tableau, Qlikview etc..)
- ML and DL experience

## what you'll do

- Implement and deploy data solutions and pipelines
- Develop rapid prototypes and proofs of concept to help digital solutions portfolio
- Engage with key stakeholders and take ownership of deliverables.
- Understand business problems and propose technical solutions
- Automate solutions and improve overall productivity and resource availability
- Build batch and streaming data pipelines with tools such as Spark and cloud-based data services like Google's BigQuery, Dataproc, Pub/Sub, etc.

## what you'll get

- Health Benefits
- Innovation-driven culture
- Smart and fun team to work with
- Friends for life 😊
